- Mac OS X v10.7 or higher
- Intel® or AMD 3 GHz processor
- 1 GB RAM
- Java™ 7 Runtime Environment or later
- Standard USB 2.0 port
- 1024 x 768 at 32-bit color or higher resolution

Polling with TurningPoint Lite

1. Plug the receiver into an available USB port.
2. Open the TurningPoint Lite program.
3. To change the channel on the receiver click the drop-down menu below Receiver Channel and select the desired channel.

   **NOTE**
   When the receiver is plugged in, it is automatically recognized by the computer.
   The default channel on the receiver is set to 41. Changing the channel allows multiple receivers to accept different sets of responses when in close proximity of one another. The ResponseCards need to be set to the same channel as the receiver when polling.

4. Click to open polling.
   Participants may now respond. As participants respond the number of responses received is displayed.

5. Click to close polling.
6. Click to view the chart area.
7. Click to close the chart area.
8. Repeat steps 4 - 7 to poll another question.
